

HIGH-TECH HEALTHCARE ...Access on the High Seas

Thanks to AET's I*NET™ global telecommunications network, today's heavily traveled cruise ships and specialty lines can finally have easy access to the finest medical specialists, advanced diagnostic tools and health information from around the world. Major carriers can connect to an AET medical telecom operations center to serve the needs of travelers, particularly older passengers who may require access to medical care. On board, AET takes over where existing capabilities fall short. While these carriers may have ship's physicians, these doctors are often unfamiliar with a traveler's specific medical needs and history. If, for example, a patient suddenly requires cardiac or diabetic care, AET can quickly provide a ship's physician with a patient's critical historical or pharmacological information via an AET data search. Should a patient become incoherent, comatose, or suffer an epileptic seizure, AET can search the patient's medical pharmacology to prepare the right medicine and revive the patient. For ships cruising the seven seas, AET brings advanced healthcare from the four corners of the world.

REAL-TIME CLINICAL AND EDUCATIONAL SERVICES

AET leverages today's most advanced communications technologies to deliver telemedicine and tele-education—in real time. Using intercontinental video/audio links, E-1 line Internet connectivity and communications satellite transmission, I*NET brings a world of information, education, and medical science to cruise ships worldwide. AET clinical services include MRI, CT scans, diagnostics, pathology, oncology and dermatology and psychology. Educational services include everything from distance learning and patient education to for-credit courses and more.

ROUND-THE-CLOCK ACCESS

I*NET provides clinical services 24 hours a day, helping healthcare providers diagnose and manage their patients' medical conditions—when extensive travel is either impractical or cost-prohibitive. Services are provided in three ways:

Routine Services—patient information sent electronically to the I*NET hub where a physician performs an analysis and returns a report within 24 to 48 hours.

Scheduled Consultations—arranged in advance for real-time interaction between the patient, the patient's current physician, and a U.S. based physician specialist.

Emergency Consultations—real-time interaction between patient, the patient's current physician, and a U.S. based physician specialist.

TELE-EDUCATION & SEMINARS

AET's extensive network of academic and institutional contacts can provide high quality, for-credit course work, seminars, pre-recorded and real time health programming for lay audiences, and non-health conferences through I*NET.
